A tour aims to educate cat and kitten owners about parasites and zoonotic disease. The Companion Animal Parasite Council's national education program kicks off this summer to draw greater attention to the importance of year-round parasite control in cats and dogs. The 17-day tour begins July 22 at the conclusion of the American Veterinary Medical Association Conference, leaving New Orleans for Houston.

Activities for pet owners are scheduled along the way. During some of the educational tour stops, the CAPC will host events at places such as Wrigley Field in Chicago, Prospect Park in Brooklyn and popular dog parks across the country. Pet owners who visit the tour bus will enjoy free giveaways — including a chance to win a tropical vacation package — and family-oriented activities such as pet demonstrations. The CAPC also will distribute information about parasites and zoonotic disease.

“Parasites can be found in all 50 states, every day of the year — regardless of the weather. So the CAPC recommends that pet owners use easy-to-administer preventive medicines year-round to control internal and external parasites — such as roundworms, heartworms, fleas and ticks — for the life of their dog or cat, no matter where they live,” said Michael Paul, DVM, executive director of the CAPC.

The dates and cities included in the tour are:

July 22, Houston July 24, Oklahoma City July 25, Kansas City, Mo. July 26, Indianapolis July 27, Chicago July 30, Boston July 31, Mystic, Conn. (pet owner event only) August 1, Paramus, N.J. August 2, New York City (pet owner event only) August 3, Baltimore August 4, Raleigh, N.C. August 5, Atlanta August 6-7, Charleston, S.C.

The tour will feature presentations from several CAPC board members, including Byron Blagburn, Ph.D., from Auburn University College of Veterinary Medicine, and Susan Little, DVM, Ph.D., from the Center for Veterinary Health Science, Oklahoma State University, on “More than Just Pests: Understanding the Risks of Vector-borne Diseases.” Dwight Bowman, Ph.D., from Cornell University, will speak on “Parasites are Everywhere: The Case for Aggressive, Year-Round Control.”

A similar tour focusing on the West Coast is in the works for next summer.
